

1. Hacemos backup desde el manager de odoo y le damos a Backup para poner nuestra contraseña y descargar el archivo.

2. Borramos desde docker nuestro anterior compose y vaciamos todas las carpetas de web-data y config, hacemos esto en la terminal dentro de nuestra carpeta odoo donde están las carpetas vaciadas.

```
< Adrian on Sunday at 9:13 PM
> docker-compose up -d
time="2024-10-27T21:14:53+01:00" level=warning msg="C:\\Users\\Adrian\\Desktop\\odoo\\docker-compose.yml: the attribute `version` is obsolete, it will be ignored, please remove it to avoid potential confusion"
[+] Running 2/2
 ✓ Container odoo-db-1   Started      0.3s
 ✓ Container odoo-web-1  Started      0.6s

< Adrian on Sunday at 9:14 PM                                0.883s MEM: 75% (11/15GB)
> { home ⇌ Desktop ⇌ odoo }
```

3. Abrimos odoo, iniciamos la nueva database, y vamos al localhost 8069 en nuestro navegador, nos saldrá esto.

Warning, your Odoo database manager is not protected. To secure it, we have generated the following master password for it:

8x65-3w9v-fdv5

You can change it below but be sure to remember it, it will be asked for future operations on databases.

Neutralize

☐

This database might have been moved or copied.

In order to avoid conflicts between databases, Odoo needs to know if this database was moved or copied.

If you don't know, answer "This database is a copy".

☒ This database is a copy

☐ This database was moved

5. Finalmente, ingresamos las credenciales de correo que teníamos para acceder a toda nuestra base de datos de odoo.
